

## Seaguar Knot

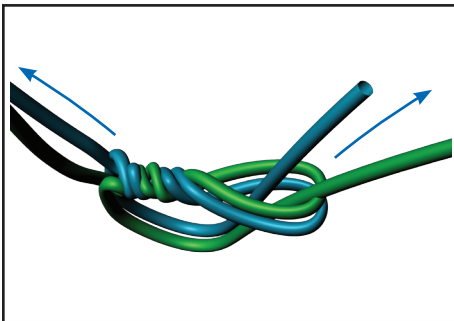

**Step 1** Form a loop in the line and in the leader and hold loops side by side.

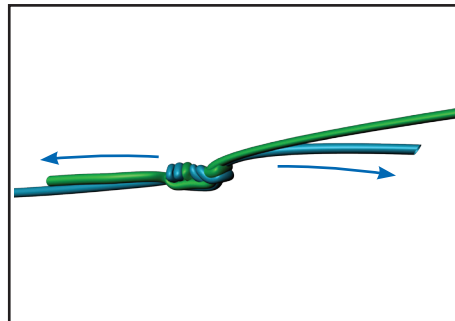

**Step 2** Insert index finger into loops and make 3 full counter-wise twists.

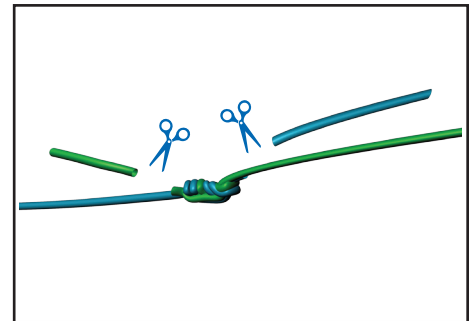

**Step 3** Hold loops open and feed tag end of line and leader through the loop.

**Step 4** Lubricate line and pull all four ends to cinch the knot forming a figure eight.

**Step 5** Pull tag ends to and leader and line to fully tighten.

**Step 6** Trim the tag ends.

**Uses:** This knot is easy to tie and reliable. It is a good choice for joining fluorocarbon leaders to monofilament and superbraid line.

**Tying it:** Anglers with large hands or weak eyes may consider using a pen style brass knot tier to assist in tying this knot.

**Advantages:** It retains a high percentage of main-line strength and has a wind-on profile—great when using long, low-visibility leaders.
